Clark County Mosquito Control District

Adult Mosquito Surveillance

2003

Introduction

The adult mosquito surveillance program of the Clark County Mosquito Control District is now in full operation. As mentioned in last year's report, prior to 2002 this program was contracted to Multnomah County. Last year we took on this program ourselves. Traps were purchased and a limited surveillance program was undertaken.

The 2003 surveillance program was able to begin when the season first got underway. Trapping and identification went on throughout the entire mosquito year. One addition to the program this year was the purchase of a "Vec-Test kit." This allowed us to test mosquito pools for the presence of West Nile virus and St. Louis encephalitis.

The surveillance program is multi-faceted. Along with the encephalitis surveillance traps, there are also programs of larvae collection and identification, daily recording of river levels, and collection of dead birds for West Nile virus testing. The combination of all these programs allows us to monitor mosquito populations and species and to alert us to the presence of a potential human health hazard.

The information provided in this report shows trapping sites and results, larvae collection and species found, river levels, and West Nile virus testing results from Clark County and the State of Washington.

The Clark County Mosquito Control District will continue the surveillance program in the coming years, and will continue to upgrade equipment and education so that we can better meet our goal. This goal, simply stated, is to reduce mosquito populations in the effort to minimize mosquito-borne diseases.

Trapping Results

2003

The following charts are representations of trapping done in 2003. They are broken down by areas and also include the numbers for individual traps. The charts represent only the number of mosquitoes that were placed under the microscope. In all, approximately 11,000 mosquitoes were trapped with over 1,800 undergoing the identification process.

Species Trapped — 2003

The chart below indicates the species of mosquitoes that have been identified during each year. These are the samples that are brought back to the shop by the crew after surveying a site.

	Aedes vexans	Ochlerotatus sticticus	Aedes cinereus	Ochlerotatus sierrensis	Ochlerotatus increpitus	Culex pipiens	Culex tarsalis	Anopheles freeborni	Anopheles punctipennis	Culiseta inornata	Culiseta incidens	Culiseta Particeps	Culiseta minnesotae	Coquillettidia perturbans
1998	X	X	X	X		X	X	X	X	X	X			X
1999	X	X	X	X	X	X	X	X	X	X	X			X

2002	X	X	X		X	X	X	X	X	X	X	X		X
2003	X	X		X	X	X	X	X	X	X	X			X

Mosquitoes trapped in 2003

SPECIES	NUMBER	* The "Other" column includes:
Ae. vexans	589	Ae. sierrensis 1
Oc. sticticus	660	Cs. inornata 1
Ae. washinoi	20	Cq. perturbans 1
Cx. pipiens	240	
Cx. tarsalis	255	
An. freeborni	9	
An. punctipennis	40	
Cs. incidens	25	
Other*	3	

The chart above shows the number of mosquitoes that were identified in our trapping program. Thirty (30) traps were set out over the season and approximately 11,000 mosquitoes were collected. 1,841 of these mosquitoes were identified. The results from individual traps and areas are shown in following charts.

Ridgefield Results

There were seven (7) traps placed in the Ridgefield area this year. The charts below show the total number of mosquitoes trapped in each area. Once again this area showed mainly the flood water species (Ae. vexans and Oc. Sticticus).

Total # trapped in Ridgefield — 5,050 (approx.) Total # ID'd — 614

ABRAMS PARK

Cx. pipiens	20
Cx. tarsalis	22
An. punctipennis	5

Salmon Creek Results

Seven (7) traps were placed in the Salmon Creek area this year. Again, the totals shown on the charts reflect the total number for the given trapping site. One site, located at 610 NW 133rd Circle, yielded no identifiable mosquitoes.

SALMON CREEK TRAIL

SPECIES	NUMBER
Ae. vexans	3
Ae. washinoi	3
Cx. pipiens	13
Cx. tarsalis	9
Cs. incidens	5

PINE CREST GOLF COURSE

SPECIES	NUMBER
Ae. vexans	136

Oc. sticticus	10
Cx. pipiens	25
Cx. tarsalis	53
An. punctipennis	10
Cs. incidens	4

Camas/Washougal Results

There were six (6) traps set in the Camas/Washougal area this year. The mosquitoes found varied, depending on the site and its relation to the floodwaters of the river. As with the other area results, the charts below reflect the total numbers for the given sites.

WASHOUGAL RACE TRACK

SPECIES	NUMBER
Ae. vexans	1
Oc. sticticus	21
Cx. pipiens	7
Cx. tarsalis	4
An. punctipennis	3
Other	6

STEIGERWALD REFUGE

SPECIES	NUMBER

OAK PARK/CAMAS

SPECIES	NUMBER
Cx. pipiens	29
Cx. tarsalis	1

Vancouver Lake Results

The Vancouver Lake area had a total of six (6) traps set this year. As was expected, the species found most was of the floodwater variety. One trapping that was done at Vancouver Lake Park came up totally empty. The other three areas are shown in the charts below.

LAKESIDE MOBILE ESTATES

SPECIES	NUMBER
Ae. vexans	132
Oc. sticticus	10
Cx. pipiens	25
Cx. tarsalis	53
